About Our Hospital

The Hospital Management System (HMS) is designed for Any Hospital to replace their existing manual, paper based system. The new system is to control the following information: patient information, room availability, staff and operating room schedule, and patient invoices. These services are to be provided in an efficient, cost effective manner, with the goal of reducing the time and resources currently required for such tasks. A significant part of the operation of any hospital involves the acquisition, management and timely retrieval of great volume of information. This information typically involves: patient personal information and medical history, staff information, room and ward scheduling, staff scheduling, operating theater scheduling and various facilities waiting lists. All of this information must be managed in an efficient and cost effective manner so that an institution's resources may be effectively utilized. HMS will automate the management of the hospital making it more efficient and error free. It acts as a centralizing info, consolidating data ensuring data integrity and reducing inconsistencies.
